The School of Clinical and Rehabilitation Sciences within the Bouvé College of Health Sciences at Northeastern University brings together the clinical fields of physical therapy (<https://bouve.northeastern.edu/physical-therapy/>), speech-language pathology and audiology (<https://bouve.northeastern.edu/csd/>), and physician assistant studies (<https://bouve.northeastern.edu/physician-assistant/>). #Students and fellows in the school are prepared for clinical and research excellence, training with interdisciplinary experts in habilitation and rehabilitation sciences, epidemiology, neuroscience, engineering, physiology, exercise science, clinical medicine, design, diagnostic and therapeutic imaging, and communication. Working at the intersection of rehabilitation, clinical practice, data, and engineering, students and fellows engage in transformative research and experiential learning that prepares them to improve the quality of life and self-care for patients and communities, while promoting and developing innovative approaches to the future of healthcare.

## **Communication Sciences and Disorders**

The Department of Communication Sciences and Disorders offers a four-year undergraduate major (Bachelor of Science in Speech-Language Pathology and Audiology), two combined majors, and two undergraduate minors. Additionally, CSD offers a five-year PlusOne bachelor's/master's program that allows students to accelerate the attainment of the graduate degree. See additional information on accelerated bachelor/graduate degree programs. (<https://registrar.northeastern.edu/article/plusone-program-accelerated-bachelorgraduate-degree-programs/>)

Speech-language pathologists and audiologists are involved with the evaluation, treatment, counseling, and research of human communication and its disorders. They provide clinical services to a full range of individuals with communication delays/differences/disorders, from infants through geriatrics. Speech-language pathologists treat developmental language and articulation disorders/delays; voice and resonance problems; stuttering; dysarthria and apraxia; pediatric and adult swallowing disorders; and language and cognitive impairments due to stroke, head injury, and progressive neurological disease. Audiologists specialize in the prevention, identification, assessment, and rehabilitation of hearing disorders for individuals with congenital and acquired hearing impairments. Both speech-language pathologists and audiologists require graduate education to practice as certified and licensed clinicians.

## **BS in Speech-Language Pathology and Audiology**

The degree program for the Bachelor of Science in Speech-Language Pathology and Audiology includes an experiential learning component, a broad-based academic core, and the scientific and clinical courses necessary for understanding normal and disordered communication. The degree offers preprofessional training for individuals who want to pursue graduate education. Alternatively, graduates may pursue certification and be hired as

speech-language pathology or audiology assistants in a variety of clinical settings, or they may pursue other career paths in areas such as healthcare/administration, education, public health, human services, or media/public relations.

The SLPA curriculum is designed to facilitate critical thinking, information literacy, as well as oral and written communication skills. In addition to courses in the basic communication sciences, coursework in education, allied health, ethics, multicultural/diversity issues, and psychology is required. The curriculum provides a solid foundation in SLPA, and it is sufficiently flexible to provide students with the opportunity to minor in an area of related interest.

## **BS Combined Majors**

Two combined majors are available for students to pursue: the Bachelor of Science in Communication Studies and Speech-Language Pathology and Audiology and the Bachelor of Science in Linguistics and Speech-Language Pathology and Audiology.

The combined Bachelor of Science in Communication Studies and Speech-Language Pathology and Audiology offers an interdisciplinary approach to human communication and its disorders. Coursework focuses on the scientific and theoretical frameworks of speech, language, and hearing. Students are introduced to the fundamentals of communication theory, and they have an opportunity to acquire the practical skills necessary to thrive in a complex, dynamic society. The curriculum is enhanced by experiential learning opportunities that prepare students for a variety of professional careers.

The combined Bachelor of Science in Linguistics and Speech-Language Pathology and Audiology provides students with extensive background in the formal structures of human language; the methods and applications of linguistic analyses of language data; the biology, neurology, and physics of the human vocal tract; and the nature of both normal and disordered human speech communication and language development.

Students have an opportunity to develop critical thinking, information literacy, as well as strong oral and written communication skills. The curriculum is enhanced by experiential learning opportunities that prepare students to pursue graduate degrees in speech-language pathology or audiology as well as careers in other related healthcare domains or education.

## **Minors**

Two flexible minors are available for students to pursue. These minors allow students from various fields of study to enhance their academics with general courses related to the field of communication sciences, as well as specific courses covering topics such as audiology or speech-language disorders across the life span. Advisors assist students with accommodating their interests within their established major curriculum plans.

*Note:* The minors are not open to students majoring in the Bachelor of Science in Speech-Language Pathology and Audiology or those pursuing a combined major with this major. In addition, students are only eligible to declare one minor within the department (i.e., either the CSD or SLPA clinical minor).

### **COMMUNICATION SCIENCES AND DISORDERS MINOR**

The Minor in Communication Sciences and Disorders includes courses that offer exposure to a variety of aspects of the field. While this minor does not, by itself, fully prepare students for admission to graduate programs in speech-language pathology or audiology, it facilitates progress toward these graduate programs, in addition to others in fields such as applied psychology, linguistics, neuroscience, and education. Coursework is designed to help students understand the scope of practice in both fields and develop basic competencies.

The CSD minor consists of four courses, which includes a required foundation course taken prior to any CSD core or elective courses, followed by two CSD core courses and one elective course. Students may consult with an advisor in the CSD department concerning the current listing of eligible elective courses for this minor.

### **SPEECH-LANGUAGE PATHOLOGY AND AUDIOLOGY MINOR**

The Minor in Speech-Language Pathology and Audiology seeks to prepare students for admission into graduate programs in speech-language pathology or audiology. Students in this minor are on a track that would meet course prerequisites requirements for admission to our department's own Master of Science in Speech-Language Pathology (<http://catalog.northeastern.edu/graduate/health-sciences/clinical-rehabilitation-sciences/speech-language-pathology-ms/>) program.

The SLPA minor consists of one required foundation course taken prior to five department-specific SLPA core courses. Students pursuing this minor are advised to consult early and regularly with their academic advisors in order to ensure a timely completion of the combination of their major(s) and the SLPA minor requirements. Students pursuing this minor who plan to apply to graduate school at institutions other than Northeastern University are advised to carefully check admissions requirements for those programs.

## Physical Therapy, Movement, and Rehabilitation Sciences

The mission of the Department of Physical Therapy, Movement, and Rehabilitation Sciences is to impact the health and well-being of the global community by developing leaders in our fields through interprofessional experiential education, translational research, and excellence in clinical practice. The programs within the department enhance and extend students' learning through experiential education, interdisciplinary collaborations, interprofessional education, and research opportunities, making impact across our global campus and beyond. Our faculty members are leaders in education, research, and practice. Students work with faculty to conduct ongoing research in one of the many diverse Department of Physical Therapy, Movement, and Rehabilitation Sciences' research groups and laboratories, including Neuromotor Systems Laboratory, Laboratory for Locomotion Research, ReGame-XR Laboratory, Movement Neuroscience Laboratory, Musculoskeletal Epidemiology and Biomechanics Laboratory, Neurophysiology Laboratory, Occupational Biomechanics and Ergonomics Laboratory, Teaching and Learning with Innovation Laboratory, the Programmable and Reconfigurable Soft Engineered Systems Lab, and the Center for Cognitive and Brain Health.

At the undergraduate level, the department's faculty work with students from across the university to optimize their bachelor's degree experience in preparation for our graduate doctoral program in physical therapy. Students may enter a range of degree programs at Northeastern included in the health sciences department within Bouvé and programs in the College of Science and the College of Engineering. A guaranteed priority admission pathway (<https://forms.office.com/Pages/ResponsePage.aspx?id=gcLuqK0qrk2sm5o5i5IV56qaoIN-LopKpLQqV01nZHxUMUtHWIQzT1BHTDBCOTNFTDQySFo2TIFaNS4u>) exists for those students who have met the prerequisite criteria.

The department offers a Minor in Human Movement Sciences. The minor enhances multiple degree programs at Northeastern with fundamental concepts in human movement and rehabilitation sciences—including anatomy and physiology, human kinesiology, and motor control—as well as sports medicine, functional neuroanatomy, and exercise physiology.

## Minor

- Human Movement Science (<http://catalog.northeastern.edu/undergraduate/health-sciences/clinical-rehabilitation-sciences/human-movement-science-minor/>)
